

# T7 Cloud Simulation

On-demand access simulation

## T7 Cloud Simulation Overview

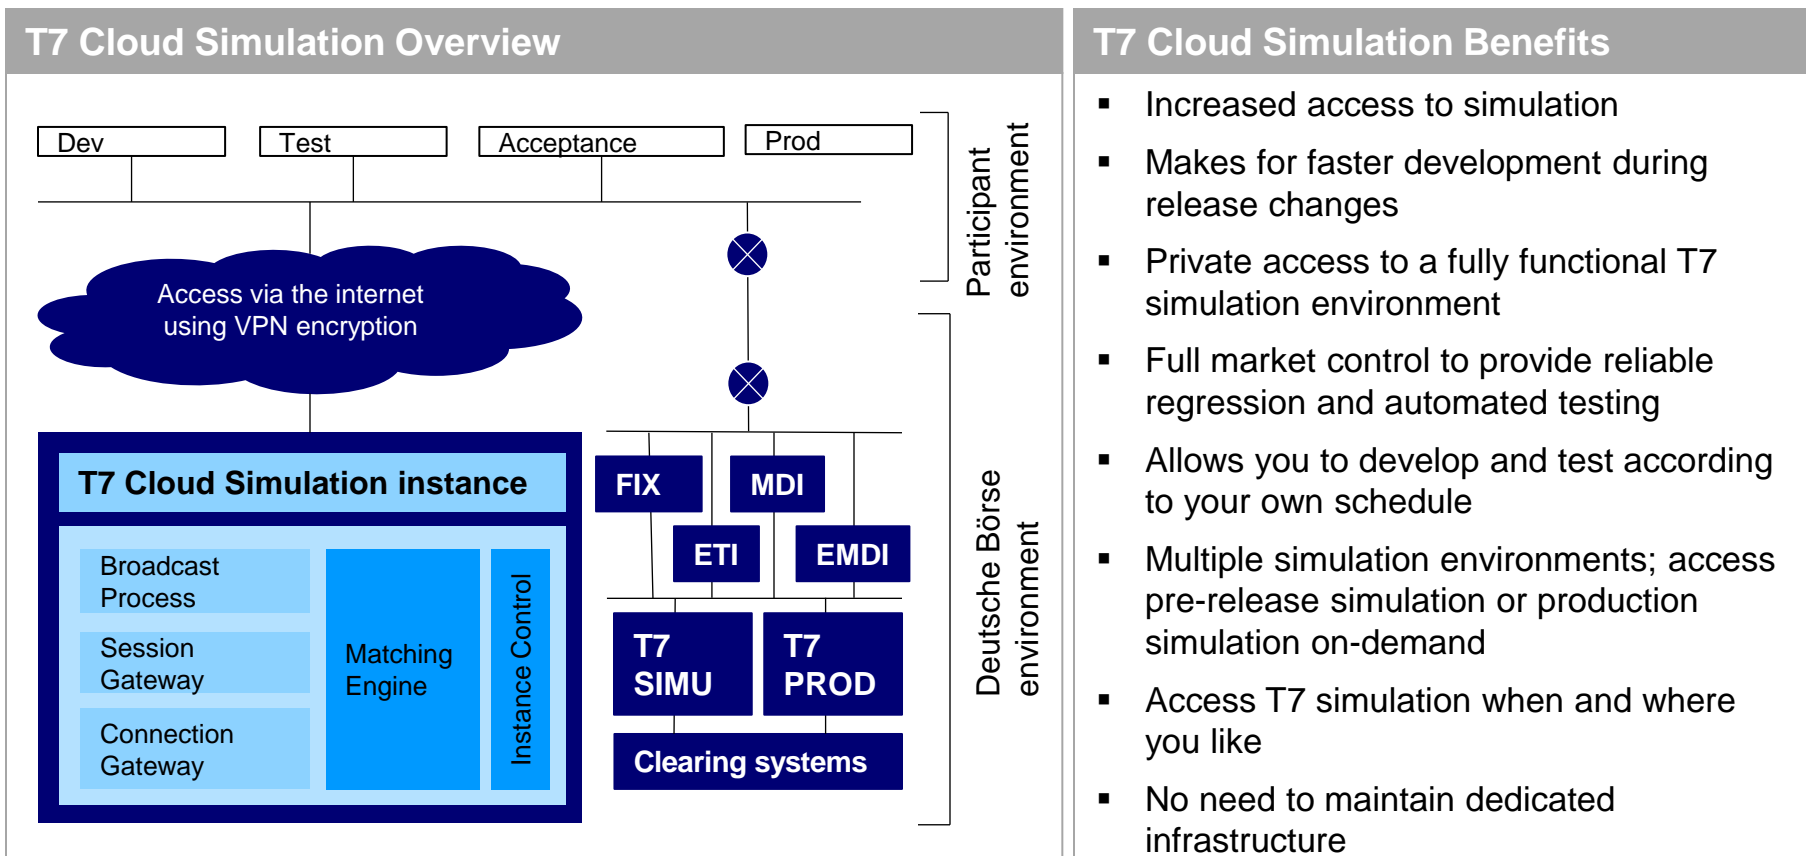

The T7 Cloud Simulation allows participating customers to deploy a private, on-demand instance of a T7 simulation environment for testing and development purposes. This instance is created and runs within a public cloud infrastructure allowing customers access from any computer with internet access anywhere in the world.

The T7 Cloud Simulation does not replace the T7 permanent simulation environment; it enhances it. Its low-cost, consumption-based billing model offers customers easy access to a commitment-free environment for developing and testing trading software. Participants use and pay for as much access to the T7 Cloud Simulation as they choose. There are no minimums or maximums.

Participants can choose from two different simulation environments when they request an T7 Cloud Simulation instance. They can choose to access the same version of software that is running in the Permanent Simulation environment, the same version running in production, or both at the same time.

# T7 Cloud Simulation Service Offering and Benefits

Almost all participants can benefit from Deutsche Börse's T7 Cloud Simulation platform.

## Supported Interfaces

T7 Cloud Simulation offers members access to T7's standard interfaces including:

Infrastructure components	Trading interfaces	Market data
<ul style="list-style-type: none"><li>▪ ETI Connection Gateway</li><li>▪ ETI Trading Gateway</li><li>▪ FIX Gateway</li><li>▪ Broadcast Gateway</li><li>▪ Matching Engine</li></ul>	<ul style="list-style-type: none"><li>▪ Enhanced Trading Interface (ETI)</li><li>▪ FIX</li></ul>	<ul style="list-style-type: none"><li>▪ Market Data Interface (MDI)</li><li>▪ Enhanced Market Data Interface (EMDI)</li><li>▪ Enhanced Order Book Interface (EOBI)</li></ul>

Access includes four unique member IDs, each enabled with

- four trader IDs (one security coordinator, one head trader and two traders)
- high-frequency ETI sessions
- low-frequency ETI sessions

# T7 Cloud Simulation User Experience

**Step 1: Member logs into the T7 Cloud Simulation (CS) start page and requests an Instance**

T7 Cloud Simulation start page

**Step 2: A CS instance spins up for the member**

T7 Cloud Simulation (CS) start page

## T7 Cloud Simulation In a Nutshell

T7 Cloud Simulation allows members and customers to ...

- Control the market:
  - Create your own order books
  - Set the market trading phase
  - Change the state of specific products
  - Use the Liquidity Generator and Auto Matcher
  - Enter trade reversals
  - Test failover scenarios
  - Predefine market scenarios and test specific strategies that would not be possible in a shared environment.
    - Create unique order books
    - recreate specific trading scenarios
- Test strategies that are difficult / impractical to test in a shared environment
- Perform regression testing based upon own parameters
- Automate application testing to decrease development costs

## T7 Cloud Simulation Limitations

Deutsche Börse's T7 Cloud Simulation platform is different from the Permanent- or Release-Simulation environments. Beside its benefits it has limitations:

- No GUI Access (which means):
  - No user/entitlement maintenance
  - No trade enrichment maintenance
  - No trading user or business unit stop actions
  - No book order limits maintenance
  - No product state messages
- No connection to Clearing (which means):
  - You can't test clearing / end-to-end trade processing
  - No Member risk actions will be processed
  - No Transaction-Size-Limit / Max-Order-Quantity maintenance
- You can't save data from an instance for audit trail or reports for later use
- Support is limited due to the information available is limited to your private instance
- The order book is empty when starting your private instance
- You can only use the standard Member ID's provided (it is not possible to create an instance with your specific Member ID)
- There is no Market Supervision and you can't test against other 'real' participants

## T7 Cloud Simulation Outlook

Deutsche Börse's T7 Cloud Simulation platform is highly customisable. We plan to launch further enhancements and functionality to complement our service in future releases, including:

- Leased Line connectivity
- Mass Cancellation notifications
- Sophisticated automated trade-generation scripts
- Intraday product expirations
- Basic reporting / audit trail in the event of updated regulatory requirements
- Historical order book data subscriptions

Thank you for your consideration
